

## Onsite Installation Checklist for the TS150e® and the 3M Scanner

1.0	Inspecting the Setup Area	
	Is the area at least 4 x 2 feet? Is the area free of dust and/or dirt (clean the area if necessary). Ensure there are 3 open power outlets nearby.	Notes:
2.0	Unboxing the Mill and Computer	
	Take pictures of the box shock sensors.  Lift the mill and place on the work area.  Remove the air packaging from the cabin.  Unbox the computer, monitor, mouse and keyboard and arrange on the work area.  Remove the power and HMDI cables from the computer box.  Remove the power and USB cables from the accessory box.  Remove the power cable from the monitor box.	Notes:
3.0	Connecting the System	
	Connect the power cable to the back of the computer and plug it into an outlet.  Connect the keyboard to the top USB port on the back of the computer.	Notes:
	Connect the mouse to the front right USB port.  Connect the power cable to the back of the monitor and plug it into an outlet.	
	Connect the HDMI to the back of the monitor and the HDMI output port on the computer.	
	Connect the USB cord to the back of the mill and to the bottom back USB port of the computer.	
	Verify that the air pressure at the doctor's office is between 50 to 80 psi. <b>Note:</b> if the air pressure is outside of the range, a regulator is required.	
	When the pressure is in range, connect the air hose $(3/8")$ to the back of the mill.	
	Turn on the mill, computer and monitor.	
	Enter the supplied user name and password for the Software Agent, Conversion Service, Mill Control Panel and FastDesign.	
	Clean the area of all packing materials.	

## Onsite Installation Checklist for the TS150e® and the 3M Scanner

	Tidy up the wires to make the work area neat and safe.	
	Take a picture of the system after all peripherals are connected.	
4.0	Verifying the Software and Homing Process	
	With the Mill Control Panel open, observe that the mill is initializing and homing.	Notes:
	Verify the versions of the following CloudPoint elements:	
	□ Software Agent	
	☐ Case Conversion Service	
	<ul><li>☐ Mill Control Panel</li><li>☐ FastDesign</li></ul>	
	☐ CaseFileService (check in control panel - add/remove	
	program)	
	☐ CC Client (check in control panel - add/remove program)	
	Verify that the Chairside Design Station is enabled.	
	Verify the internet connection speed.	
	Verify WiFi signal strength.	
	Set up the 3M Scanner cart to send to CloudPoint FastDesign.	
	Test that a file can be sent from the scanner to FastDesign.	IP:
	Do a quick design and check that the file can be sent from FastDesign to the Mill Control Panel.	
5.0	Calibration Check	
5.0	Calibration Check Switch the Mill Control Panel to technician mode.	Notes:
		Notes:
	Switch the Mill Control Panel to technician mode.	Notes:
	Switch the Mill Control Panel to technician mode. Check the mill settings.	Notes:
	Switch the Mill Control Panel to technician mode. Check the mill settings. Fill the trough with DI water. Run pump and air for 5 minutes. Run Z calibration.	Notes:
	Switch the Mill Control Panel to technician mode. Check the mill settings. Fill the trough with DI water. Run pump and air for 5 minutes.	Notes:
	Switch the Mill Control Panel to technician mode. Check the mill settings. Fill the trough with DI water. Run pump and air for 5 minutes. Run Z calibration. Run XY calibration. Export the mill settings with file name format of	Notes:
	Switch the Mill Control Panel to technician mode. Check the mill settings. Fill the trough with DI water. Run pump and air for 5 minutes. Run Z calibration. Run XY calibration. Export the mill settings with file name format of SMXXXX_MMDDYYYY.xml. Forward to:	Notes:
	Switch the Mill Control Panel to technician mode. Check the mill settings. Fill the trough with DI water. Run pump and air for 5 minutes. Run Z calibration. Run XY calibration. Export the mill settings with file name format of SMXXXX_MMDDYYYY.xml. Forward to: TechnicalSupport@GlidewellDental.com.	Notes:
	Switch the Mill Control Panel to technician mode. Check the mill settings. Fill the trough with DI water. Run pump and air for 5 minutes. Run Z calibration. Run XY calibration. Export the mill settings with file name format of SMXXXX_MMDDYYYY.xml. Forward to: TechnicalSupport@GlidewellDental.com. Clean the trough. Change used DI water to coolant.	Notes:
	Switch the Mill Control Panel to technician mode. Check the mill settings. Fill the trough with DI water. Run pump and air for 5 minutes. Run Z calibration. Run XY calibration. Export the mill settings with file name format of SMXXXX_MMDDYYYY.xml. Forward to: TechnicalSupport@GlidewellDental.com. Clean the trough. Change used DI water to coolant. Run the pump and air for 10 minutes.	Notes:
	Switch the Mill Control Panel to technician mode. Check the mill settings. Fill the trough with DI water. Run pump and air for 5 minutes. Run Z calibration. Run XY calibration. Export the mill settings with file name format of SMXXXX_MMDDYYYY.xml. Forward to: TechnicalSupport@GlidewellDental.com. Clean the trough. Change used DI water to coolant. Run the pump and air for 10 minutes. Run a BruxZir NOW NC file.	Notes:

Complete a quick design for each case and send the cases to the	Notes:

## Onsite Installation Checklist for the TS150e® and the 3M Scanner

	Wipe the mill and mill cabin clean.		
6.0	Instructing the Customer		
	Instruct the customer on changing the bur, coolant and block, as well as using the Mill Control Panel.	Notes:	
	Talk through the requirements for maintenance of the mill.		
	Ask if there are questions.
