Introducing the Inclusive® Dental Implant System

The Inclusive® Dental Implant System is the result of an expansive effort to offer clinicians and their patients a simple, convenient, affordable way to restore missing dentition. Choose between conventional-diameter or small-diameter implant assortments, supported by a wide array of restorative options, and discover a system streamlined for ease of use, yet versatile enough to address almost any clinical indication. From cementable or screw-retained single-tooth replacement to full-arch reconstruction with removable or fixed-removable prostheses, the Inclusive Dental Implant System can provide a predictable foundation for clinical success.

About the Manufacturer

Prismatik Dentalcraft was established in 2006 with the mission of making implant dentistry the standard of care for edentulous patients across the economic spectrum. To realize this goal, we carefully assembled a team of experts with decades of combined experience in the design, engineering, and manufacture of dental implants. With a support staff of highly respected researchers, material scientists, clinical specialists, and dental technicians, Prismatik is dedicated to advancing implant therapies by combining proven treatment protocols with progressive materials, technologies, and techniques.

Expert Personnel

Our team of experts have decades of combined experience in the design and manufacture of dental implants.

State-of-the-Art Equipment

Our Swiss-type lathes and multi-axis milling machines are ideal for implants and prosthetics requiring extreme precision.

Made in the U.S.A.

Our ISO-certified facility in Irvine, Calif. operates under FDA Current Good Manufacturing Practices (CGMPs).

INCLUSIVE® Tapered Implants

Inclusive® Tapered Implants are machined from high-strength titanium alloy and incorporate design features for achieving high primary stability, crestal bone preservation, soft tissue maintenance, maximum bone-to-implant contact, natural root shape, and compatibility with popular prosthetic components and instrumentation. Inclusive Tapered Implants are available in five major diameters, each of which is available in up to five lengths. Three standard prosthetic platform sizes (3.0 mm, 3.5 mm, 4.5 mm) minimizes the number of system components and simplifies the restorative process.

(Bone Profilers sold separately)

INCLUSIVE® Prosthetic Kit

Description	Code	Price
Inclusive® Tapered Implant Prosthetic Kit	70-1071-PRS0001	\$750

Features and Benefits

The instrumentation kits allow the clinician to easily organize, store and transport the surgical and prosthetic tooling of the Inclusive Tapered Implant System. The autoclavable kits have been designed for ease of use, with component labels for identification.

The color-coded surgical kit clearly maps the drilling protocol for each implant. Drills are arranged from top to bottom in order of increasing diameter, with color-coded fields to indicate the corresponding diameter of Inclusive Tapered Implant for both soft bone and dense bone protocols. **Please note that Bone Profilers are sold separately (refer to diagram, page 17).**

The prosthetic kit is designed specifically for restorative doctors, organizing all of the necessary prosthetic tooling to help simplify restorative procedures and instrument sterilization.

All instruments associated with the Inclusive Tapered Implant System are machined from corrosion-resistant, surgical stainless steel, and feature standard connectivity. All instrumentation is manufactured in the U.S.A. or Switzerland. For specific country of origin, please refer to the individual product label.

Sterilization

It is recommended that the instrumentation kits be steam-sterilized for fifteen (15) minutes at 132°C/270°F. Allow sterilized components to dry for at least thirty (30) minutes.

General Cleaning Tips:

- Observe universal precautions for the handling of contaminated or biohazardous materials.
- Clean promptly after each use, to prevent biological fluids and tissues from drying on the instruments.
- When applicable, disassemble parts and instruments prior to cleaning.
- Do not rely solely on automatic cleaning. Thorough manual cleaning is recommended.
- Preliminary cleaning should consist of wiping parts, soaking them in a lukewarm enzymatic solution for a minimum of twenty (20) minutes, and rinsing them with running water.
- Routine cleaning should consist of (a) washing parts using a broad spectrum cleaning solution, followed by thorough rinsing and drying; and (b) sonicate parts fully submerged in cleaning solution for at least ten (10) minutes, preferably at 45-50 kHz, followed by thorough rinsing and drying.

MINI IMPLANT SYSTEM

INCLUSIVE® Mini Implant System Technical Specifications

Below is an enhanced view of the Inclusive Mini Implant with O-ball Head prosthetic attachment, including a side-by-side comparison of the 2.2 mm diameter, 2.5 mm diameter, and 3.0 mm diameter implants. The stated length (10 mm, 13 mm, or 15 mm) refers to the thread length (endosseous section) of the implant, which includes the micro-threaded base of the transgingival collar.

INCLUSIVE® Mini Implants with O-Ball Head

Inclusive Mini Implants are self-tapping threaded titanium screws indicated for long-term applications. Inclusive Mini Implants may also be used for provisional applications. These devices will allow immediate loading and long-term stabilization of dentures and provisional stabilization of dentures while standard implants heal. The implants are to be used for immediate loading only in the presence of primary stability and appropriate occlusal loading.

INCLUSIVE® Mini Implant Prosthetic Components

The O-ring Housing serves as the retention cap for each Inclusive Mini Implant that is placed. The housing is picked up by the patient's prosthesis using a hard reline of the new or existing denture. These loading procedures can typically be performed immediately after placement of the Inclusive Mini Implants, provided primary stability and appropriate occlusal loading are assured.

The housing is 3.5 mm in height, and 4.75 mm in diameter. The same housing is used regardless of the diameter or length of the selected Inclusive Mini Implant. A vertical space of approximately 1 mm between the crest of the implant collar and the mouth of the housing provides for up to 30 degrees of angular divergence between seated implants.

Each housing comes packaged with one 3/16" x 1/16" O-ring seated within, plus one extra replacement O-ring.

INCLUSIVE® Mini Implant Surgical Kit Overview

INCLUSIVE® Mini Implant Surgical Kit

All instruments associated with the Inclusive Mini Implant system are machined from high-quality, corrosion-resistant, surgical stainless steel.

Description	Code	Price
Inclusive® Mini Implant Surgical Instrumentation Kit	70-1067-MNI0006	\$545

Features and Benefits

The Mini Implant Surgical Instrumentation Kit allows the clinician to easily organize, store and transport the components of the Inclusive Mini Implant System. It has been designed for ease of use, with component markings and angled rows for easy identification and to help maximize space. The durable, synthetic material is autoclavable and provides a snug, secure fit.

Drills are arranged from left to right in order of increasing diameter, with color-coded fields to indicate the corresponding diameter of Inclusive Mini Implant.

Sterilization

It is recommended that the surgical kit be steam-sterilized for fifteen (15) minutes at 132°C/270°F. Allow sterilized components to dry for at least thirty (30) minutes.

General Cleaning Tips:

- Observe universal precautions for the handling of contaminated or biohazardous materials.
- Clean promptly after each use, to prevent biological fluids and tissues from drying on the instruments.
- When applicable, disassemble parts and instruments prior to cleaning.
- Do not rely solely on automatic cleaning. Thorough manual cleaning is recommended.
- Preliminary cleaning should consist of wiping parts, soaking them in a lukewarm enzymatic solution for a minimum of twenty (20) minutes, and rinsing them with running water.
- Routine cleaning should consist of (a) washing parts using a broad spectrum cleaning solution, followed by thorough rinsing and drying; and (b) sonicate parts fully submerged in cleaning solution for at least ten (10) minutes, preferably at 45-50 kHz, followed by thorough rinsing and drying.
